

PHISHING EMAIL DETECTION & AWARENESS REPORT

Prepared By: Shreshtha S S

Course: Cybersecurity

Tools Used: Email Samples, Browser Tools

Date: (Add today's date)

EXECUTIVE SUMMARY

This report presents an analysis of various email samples to identify phishing attempts and classify them based on risk levels. Phishing attacks are a common cybersecurity threat used to trick users into revealing sensitive information such as login credentials and financial data.

The analysis highlights key phishing indicators including fake sender domains, malicious links, urgent messaging, and deceptive content. Awareness and preventive measures are essential to reduce the risk of such attacks.

OBJECTIVE

- Identify phishing indicators in email samples
- Classify emails as Safe, Suspicious, or Phishing
- Explain risks in simple language
- Provide awareness and prevention guidelines

TOOLS USED

- Email Samples (created for analysis)
- Google Admin Toolbox Messageheader (optional)
- Browser tools for link inspection

SUMMARY TABLE

Email	Subject	Classification	Risk
Email 1	Account Suspended	Phishing	High
Email 2	Prize Winner	Phishing	High
Email 3	Password Reset	Suspicious	Medium
Email 4	Meeting Reminder	Safe	Low

EMAIL 1 (PHISHING)

From: support@paypa1.com
To: user@gmail.com
Subject: Urgent: Your Account Suspended

Dear Customer,
Your account has been temporarily suspended.
Click here to verify:
<http://paypa1-login.com>

🔍 Analysis

Classification: Phishing (High Risk)

Indicators Identified:

- Fake sender domain (paypa1.com)
- Urgent language used to create panic
- Suspicious link

Explanation:

This email is designed to trick users into clicking a malicious link.

Impact:

User credentials may be stolen.

Recommendation:

- Do not click unknown links
- Verify sender email
- Access official websites directly

EMAIL 2 (PHISHING)

From: lottery@winner.com

Subject: Congratulations! You Won ₹10,000

Click here to claim your reward:

<http://claim-prize-now.com>

Q Analysis

Classification: Phishing (High Risk)

Indicators Identified:

- Unknown sender
- Too-good-to-be-true offer
- Suspicious link
- Urgency

Explanation:

This email attempts to trick users using a fake reward.

Impact:

Users may lose personal or financial data.

Recommendation:

- Ignore suspicious offers
- Avoid clicking unknown links
- Verify through official sources

EMAIL 3 (SUSPICIOUS)

From: security@bank.com

Subject: Reset Your Password

Click here to reset your password

Analysis

Classification: Suspicious (Medium Risk)

Indicators Identified:

- Generic message
- Link instead of official login
- Possible domain mismatch

Explanation:

This email appears legitimate but contains phishing signs.

Impact:

Users may unknowingly share sensitive data.

Recommendation:

- Do not click links directly
- Visit official website manually

EMAIL 4 (SAFE)

From: hr@company.com
Subject: Meeting Reminder

Meeting scheduled at 3 PM

🔍 Analysis

Classification: Safe (Low Risk)

Indicators Identified:

- Known sender
- No suspicious links
- Professional content

Explanation:

This is a legitimate email.

Impact:

No risk identified.

Recommendation:

No action required

AWARENESS SECTION

How to Identify Phishing Emails

- Check sender email carefully
- Avoid clicking unknown links
- Look for spelling mistakes
- Be cautious of urgent messages
- Verify before sharing sensitive data

Prevention Tips

- Use strong passwords
- Enable multi-factor authentication
- Report suspicious emails
- Keep systems updated

CONCLUSION

Phishing attacks are a major cybersecurity threat that rely on social engineering techniques. This report demonstrated how phishing emails can be identified using common indicators such as fake domains and malicious links.

User awareness and proper security practices are essential to prevent phishing attacks and protect sensitive information.
